Instructor to Check and comment below:

- Git/GitHub organization (e.g. organization of branches)
GitHub organization looks good
- Git/GitHub usage: Comments on positing; Number of posting to GitHub; Apr.. even distribution of submissions among team members (check GitHub post stats for all members)
GitHub messages need some work. There a lot of duplicated messages. For example, there are like ~30 commits with the message “link fixing”. Messages should be meaningful. Commits should contain meaningful pieces of work.

- Code documented (header, in code) with good coding style
Code looks fine, small amount of comments.
- MVC/OO patterns followed up
followed
- Frameworks (back end front end) deployed correctly
express
- Database organization (tables, naming...)
Tables looks fine, most of the DB is empty, only the houses table contains anything.
- Blobs being used? If so, is it working?
Looks to be blob
- Adherence to best practices of security (PW encrypted, search inputs verified etc.)
No users so can't tell is pw are encrypted. Looking at code there seems to be no input validation.
- Other
